

XML service

The XML service is intended for those users who need to make large numbers of queries to the Land Register or to keep data in their own database. In order to use that service, the customer first needs to enter into an agreement at the [e-Business Register Portal](#) [1]

After entering into the agreement, the XML service has to be configured for the customer's system(s).

List of XML services of the e-Land Register:

- A person's immovable properties
- Detailed data about an immovable property
- Immovable properties in a cadastre unit

[Description of XML service](#) [2]
