

## CEPT

Cross-border enforcement proceeding tool (CEPT) is an international information system for initiating and monitoring cross-border enforcement proceedings.

The tool enables European Union (EU) citizens, businesses and bailiffs to send inquiries, applications and relevant documents and data electronically to other EU member states. The tool is complemented by a multilingual user interface to ensure access to cross-border justice for EU citizens and businesses. From the data of the entered and sent to other state, the system generates a PDF document. The document shall be in the language of the country where it shall be submitted.
